Embedded Systems

NXP

University Course

Course Contents

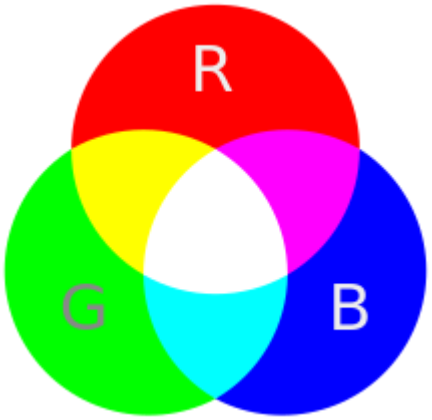
General topics, **Courses** & **Labs**

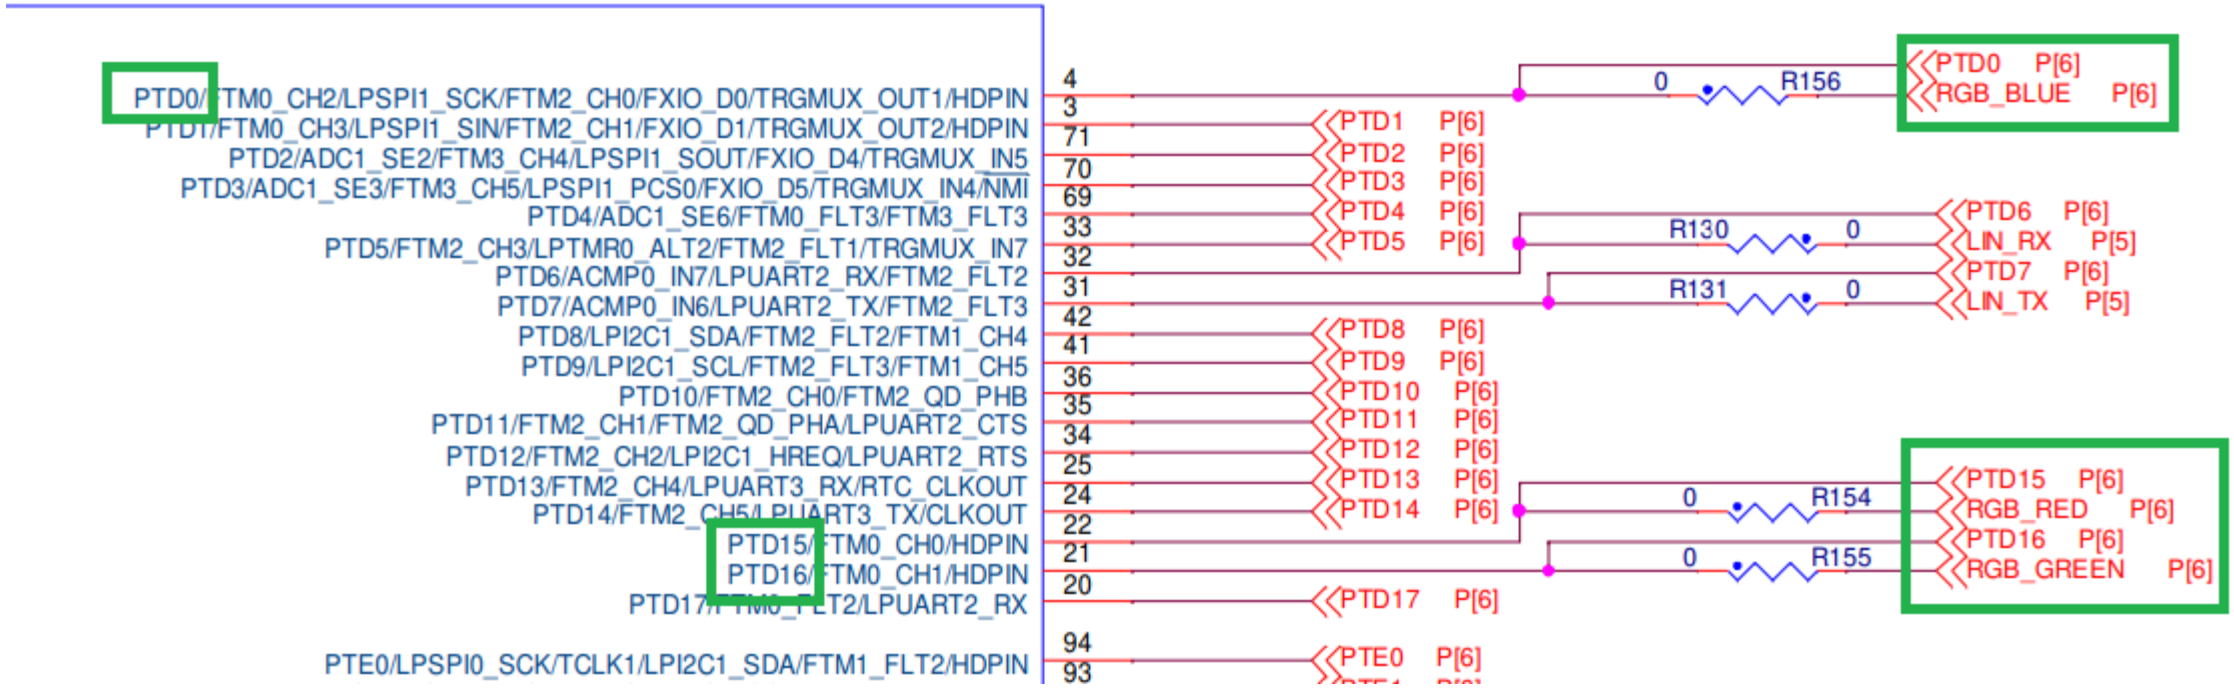
1. General Presentation of the Course
2. V-Model, Requirements Engineering, Process | Understand and Create Requirements
3. Process | Git, IDE Setup, Compile and Flash the Hello World Project
4. Architecture (UML) | Virtual Machine Environment Setup
5. How Hardware and Software are Linked | From Compiling to Electrical Signals and Debugging
6. RGB | Hands-on Lab (no module – just the dev board)
7. Node 1: Brake
8. Node 2: Lights
9. Review and Exercises

Notes and sources

Exercise: RED-YELLOW-BLUE

- The initial demo project will make the RGB LED to blink rapidly RED and GREEN colors
- Scope of this exercise is to make the RGB LED to blink on RED, YELLOW and BLUE





- RGB_BLUE – PTD0 ; RGB_RED – PTD15 ; RGB_GREEN – PTD16

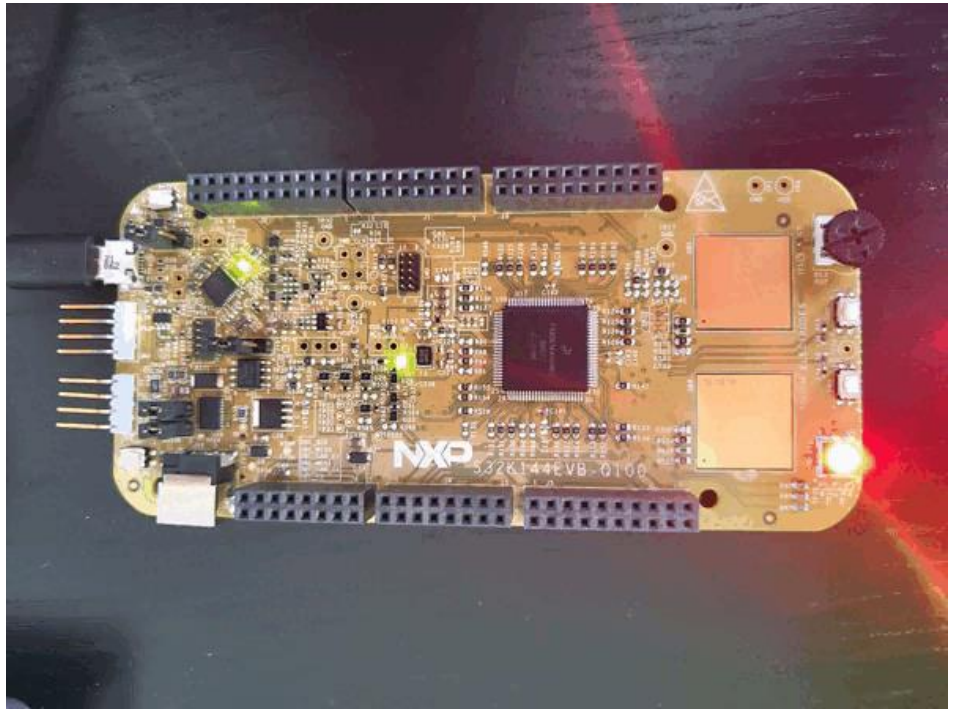
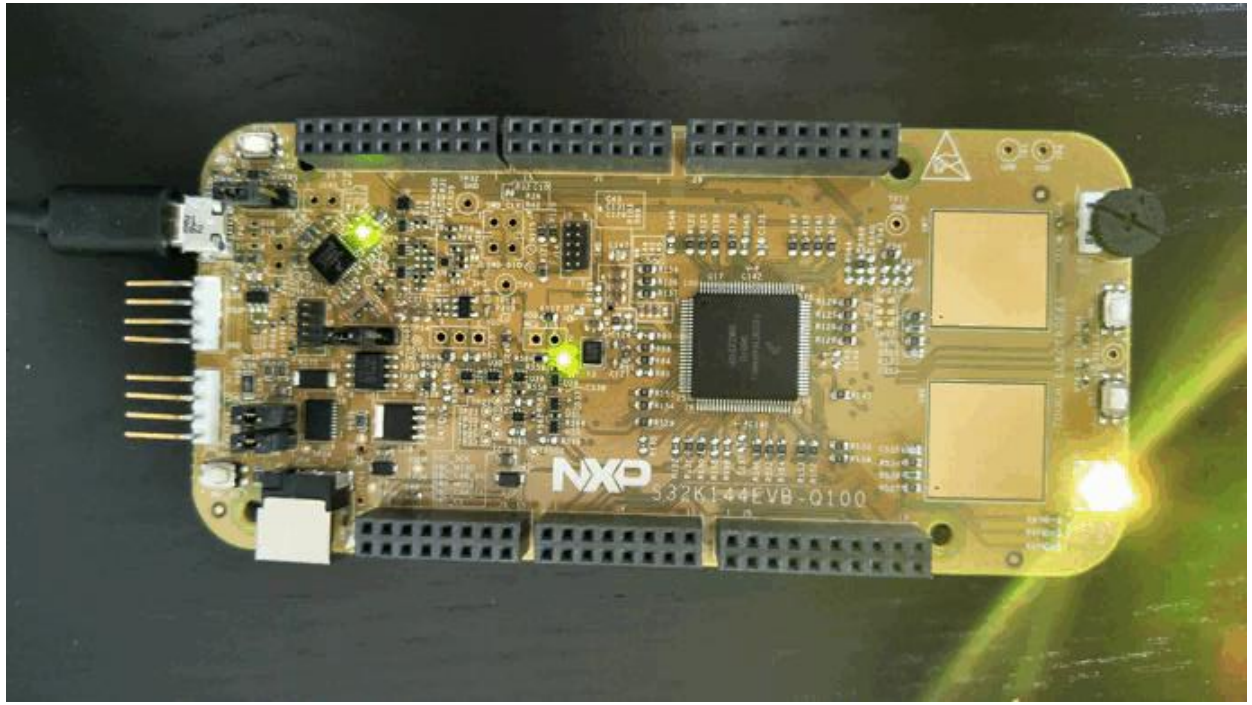
Exercise: RED-YELLOW-BLUE



Before



Target result

REPLI-CAR NETWORK

LIGHTS CONTROL NODE
Replicate Body Control Module behavior
· Actuate lights (headlamps, turn indicators), horn and washer pump based on input controller from HMI
· Communications with other nodes: HMI, PCM, Brake, Steering, Comfort

BRAKE CONTROL NODE
Replicate Brake Control Module behavior
· brake actuation and brake lamp indication based on input controller from HMI
· Communications with other nodes: HMI, PCM, BCM
